Program Summary

A Webinar program Overview of Vertical in Data Analytics was conducted in **computer science department** for second, third and final year BE students, the program held on 12 .09. 2020. The program was handled by **Mr.G.Dinesh, Associate Professor, New Horizon College of Engineering, Bangalore.** On that session the students learnt how to ensure confidentiality, integrity, authentication, availability, and non-repudiation of information stored in networked information systems. A data vertical is a concept that can supplement data hierarchies. Think of data verticals as different types of data at the company. This could be email data, website event data, mobile app data, etc. There's a good chance that different types of data are captured differently at your company. This webinar program helped the students to gain knowledge on Introduction to Machine Learning are an emerging type *of* network that is posed to play an important role in the Internet-of-Things (IoT).

Feedback Analysis Graph

The students are benefited and felt very useful about this program and also they gained much knowledge on important role in the Internet-of-Things (IoT).

Description:

➢ Based on the feedback received from the students many of the students suggested to conduct live conversation classes.

➢ Some of the students gave suggestion to have more classes in the webinar.

Action Taken:

➢ Based on the feedback given by the students we have proposed to conduct live conversation sessions.

➢ We are planning to conduct more classes for the students as early as possible.
